PROJECT PERFORMANCE TESTING

Tableau | Project Development Phase

Date	19 October 2026	**Team ID**	
Project Name	Global Fuel Prices and Taxation Trends: A Comprehensive Analysis	**Maximum Marks**	As per template

Project Performance Testing

This review records the Tableau workbook, dashboard and Story checks relevant to the fuel-price analysis. Dataset-level figures below are based on the project dataset summary; execution-time and responsiveness values should be recorded only after testing in the target environment.

S. No.	Parameter	Project-specific result / evidence to check
1	Data Rendered	Source dataset: 27,468 records, 10 columns and 84 countries; date range 2020–2026. Confirm the expected records and fields load in Tableau and that the key worksheets render.
2	Data Preprocessing	Review field names and data types for date, country, region, income_level, subsidy_level, petrol_usd_liter, diesel_usd_liter, lpg_usd_liter, brent_crude_usd and tax_percentage. Project summary reports no missing values or exact duplicate rows.
3	Utilization of Filters	Test any filters available in the published workbook (for example country, date, region, income level or subsidy level). Confirm that selections update the relevant views consistently. Do not list a filter as implemented unless it appears in the workbook.
4	Calculation Fields Used	Verify aggregations used in the views, including average petrol price by country and comparisons of fuel-price measures. Record any additional calculated fields only if they are present in the workbook.
5	Dashboard Design	Review the published Global Fuel Prices and Taxation Trends dashboard: chart titles, axes, legends, units, labels, layout and cross-view readability. Record the actual number of views from the workbook; do not estimate it from this report.
6	Story Design	Open the published Tableau Story and check that story points load in sequence, titles and explanatory text are readable, and the conclusions stay descriptive rather than claiming causation.
